SHYAM SUNDAR S

Chennai, India | +91 8870878708 | sshyam2705@gmail.com | linkedin.com/in/-shyam- | github.com/Shyam27-glitch

PROFILE

B.Tech Computer Science student (Class of 2027, GPA 8.9) working in Python and SQL on machine-learning and automated data systems. Built an end-to-end ML pipeline that scores customer behaviour and turns model output into recommended actions, and backend orchestration infrastructure with REST APIs, failure handling and automated test coverage. Currently building hands-on exposure to Generative AI, Agentic AI, LLMs and NLP through self-directed work. Interested in translating business requirements into intelligent AI workflows and in testing, evaluating and debugging how those systems actually behave.

TECHNICAL SKILLS

AI & Machine Learning: Machine Learning, predictive modelling, classification, model training and inference, automated ML pipelines, recommendation and decision support

Generative AI, LLMs & NLP: Large Language Models, Generative AI, Agentic AI and multi-step AI orchestration, LangChain, NLP, Deep Learning and Neural Networks, TensorFlow

Programming: Python, SQL, Java, C, C++, TypeScript / JavaScript (Node.js), Bash/Shell scripting

APIs, Backend & Automation: REST APIs, API integration and scripting, workflow orchestration, distributed systems, concurrency, data pipelines

Data & Databases: PostgreSQL, MySQL, SQL querying and analysis, relational schema design, Database Management Systems

Testing, Evaluation & Debugging: automated test design, structured test cases against live systems, failure detection and recovery, debugging, monitoring and observability

Cloud & Tooling: AWS (Lambda, S3, EC2, IAM), Docker, Linux, Git/GitHub

Coursework: Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks, OOP, Digital Image Processing

PROJECTS

Automated Churn Prediction & Retention Pipeline | GitHub March 2026 – May 2026

Python · Machine Learning · Model Inference · Decision Support

- Framed customer churn as a predictive classification problem and built machine-learning models in Python that score individual users by risk from raw behavioural data.
- Translated model output into a business-facing decision: ranked high-risk users paired with targeted retention actions such as discount offers, rather than returning raw probability scores.
- Automated the full path from data ingestion through inference to recommendation as an event-driven pipeline, removing manual analysis from the loop.

Distributed Job Scheduler | GitHub July 2026

TypeScript · REST API · PostgreSQL · Automated Testing

- Built multi-tenant orchestration infrastructure for multi-step automated workflows — a REST API, React dashboard and PostgreSQL schema with an append-only execution audit trail over every run.
- Guaranteed no job is claimed twice under concurrent workers using atomic database claiming, idempotency keys, and per-queue and per-worker concurrency limits.
- Implemented failure detection and recovery — worker heartbeats with a reaper that reclaims jobs from stale workers, configurable retry backoff, and a dead-letter queue for exhausted jobs.
- Validated behaviour with 25 automated test cases exercising the concurrency and recovery paths against a live database under continuous integration.

Cloud-Native Deployment Automation | GitHub March 2026

AWS · Amazon EKS · GitHub Actions · Docker · Kubernetes · Argo CD

- Automated build, test and image-push workflows for containerised applications, providing a repeatable delivery path applicable to ML and AI workloads.
- Deployed containerised workloads to Amazon EKS, with Argo CD syncing declarative releases from Git.

EXPERIENCE

Indo-Global Winter Internship — City, University of London December 2024 · 3 Months

- Contributed to the technical development of an AI-driven online classroom system alongside an overseas academic team, working to requirements defined by stakeholders in a different time zone.
- Clarified scope and documented progress, dependencies and blockers in writing, executing independently between review cycles.

EDUCATION & CERTIFICATION

SRM University, Ramapuram — B.Tech, Computer Science August 2023 – May 2027

GPA: 8.9 / 10 · Chennai, India

AWS Certified Solutions Architect – Associate (SAA-C03) | Verify on Credly February 2026

LEADERSHIP

- Led the Synergy Technical Club — owned workshops and technical events end to end, from planning through delivery, mentored junior members through real-world projects, and explained technical concepts to audiences of mixed experience levels.
- Participated in the DP World Hackathon at BITS Pilani, developing solutions in a fast-paced team environment.
